BREAST MRI REPORT

DYNAMIC CONTRAST-ENHANCED BREAST MRI REPORT

PATIENT INFORMATION:

Patient Name: Eleanor Vance (SYNTHETIC RECORD)

MRN: SYNTH-MAM-99412

Date of Examination: 08/22/2026

Modality: 3.0T Breast MRI with dynamic gadolinium enhancement

CLINICAL INDICATION:

Pre-operative staging for biopsy-proven invasive ductal carcinoma of the left breast (10 o'clock mass).

MRI FINDINGS:

LEFT BREAST: Primary lesion at 10 o'clock position measures 1.8 x 1.5 x 1.6 cm, exhibiting irregular borders and strong early enhancement with rapid washout kinetics (Type III kinetic curve). No satellite lesions or chest wall invasion identified.

RIGHT BREAST: Normal background parenchymal enhancement. No suspicious mass or non-mass enhancement.

AXILLA: No enlarged or morphologically abnormal axillary lymph nodes (largest node measures 0.8 cm with preserved fatty hilum).

IMPRESSION:

1. Solitary 1.8 cm primary malignant mass in left upper outer quadrant (10 o'clock).

2. No evidence of multifocal, multicentric, or contralateral disease.

3. BI-RADS Category 6 - Known Biopsy-Proven Malignancy.

Reported by: Dr. Aris Thorne, M.D. (Radiologist)
