SURGICAL PATHOLOGY REPORT

PATIENT INFORMATION:
Patient Name: Jane Doe (SYNTHETIC RECORD)
MRN: SYNTH-MAM-10492
Date of Procedure: 04/18/2026
Pathologist: Dr. James Okonkwo

SPECIMEN SUBMITTED:
Left breast, 10 o'clock mass, ultrasound-guided core needle biopsy.

GROSS DESCRIPTION:
Received in formalin labeled with patient identification are 4 tan-white core tissue fragments measuring 1.2 to 1.8 cm in length. E

MICROSCOPIC DIAGNOSIS:
LEFT BREAST, CORE NEEDLE BIOPSY:
- INVASIVE DUCTAL CARCINOMA (IDC), NOT OTHERWISE SPECIFIED (NOS).
- Histologic Grade: Grade 2 (Intermediate) (Tubule formation: 3, Nuclear pleomorphism: 2, Mitotic index: 1; Total score: 6/9).
- Associated Ductal Carcinoma In Situ (DCIS), cribriform pattern, intermediate nuclear grade.
- Microcalcifications present in DCIS and stroma.

IMMUNOHISTOCHEMISTRY (BIOMARKER PROFILE):
- Estrogen Receptor (ER): POSITIVE (90% nuclear staining, strong intensity)
- Progesterone Receptor (PR): POSITIVE (70% nuclear staining, moderate intensity)
- HER2 / neu Status: NEGATIVE (Score 1+ by IHC)
- Ki-67 Proliferation Index: 18% (Intermediate)

PATHOLOGICAL STAGING SUMMARY:
pT1c (1.4 cm) N0 M0

Signed: Dr. James Okonkwo, M.D.
